

# V-DPS

## Vianen Drainage Pump System

### DRAINAGE PUMP

### ADVANTAGES

- ✓ No visible direct vertical drainage required
- ✓ Robust pump system
- ✓ Low noise level
- ✓ Easy installation to the drainage system
- ✓ Can be applied to wall and island water wash systems
- ✓ Can be applied to existing Vianen water wash systems

## Vianen Drainage Pump System

### THE VIANEN SOLUTION FOR UNBECOMING DRAINAGE PIPES FOR WATER WASH AND WATER MISTY SYSTEMS

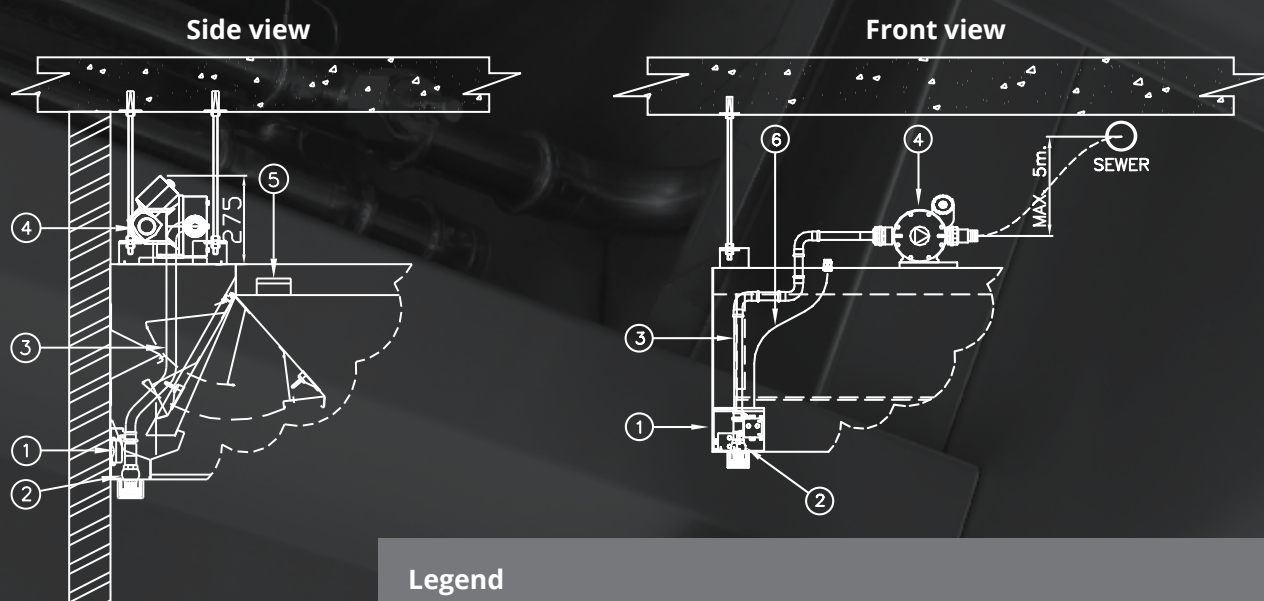

#### GENERAL

The Vianen Drainage Pump system has been designed for projects that demand a high aesthetic level. The Vianen Drainage Pump system does away with the need for a direct drainage pipe to the floor. The pump is located on the top of the canopy and takes the effluent water from the lowest point within the canopy to above the false ceiling. From above the canopy the drainage water can be brought to a remote location for vertical drainage.

#### INSTALLATION

The Vianen Drainage Pump system is pre-installed in the canopy during production and is supplied standard with a stainless steel 304 connection pipe to the drain for easy installation at site.

The maximum distance from the pump to the drain connection is 5m.

#### Legend

- |                    |                |                    |
|--------------------|----------------|--------------------|
| 1 Drain screw      | 2 Suction part | 3 Sensors          |
| 4 Pipe into canopy | 5 Pump (24V)   | 6 High water alarm |
